Summary

Software engineer specializing in generative AI, with experience building and deploying LLM-powered pipelines: a Gemini API system generating 500+ cuisines at Syncorb Geotech, and ChainSight, an explainable AI app pairing a fine-tuned YOLOv8 model with Gemini-based prompt engineering. Also shipped ZipForgeX, a full-stack Spring Boot and React platform with OAuth2 and PostgreSQL.

Skills

Languages: Python, Java, SQL

Generative AI: Gemini API, LLM Integration, Prompt Engineering, PyTorch, PaddleOCR, YOLOv8 Fine-Tuning

Data & Analytics: pandas, NumPy, scikit-learn, XGBoost, SHAP, Power BI, Excel

AI-Assisted Development: Claude, ChatGPT (debugging, prototyping, accelerated iteration)

Backend & Deployment: Spring Boot, REST APIs, PostgreSQL, Git, GitHub, Render, Vercel, Streamlit

Experience

AI Developer Intern

Oct 2025 – May 2026

Syncorb Geotech Pvt Ltd, Chennai

- Built a Gemini API pipeline generating 500+ cuisines and up to 500 dishes each, replacing manual scraping with prompt-engineered LLM calls.
- Rebuilt the menu extraction pipeline using PaddleOCR after API access was restricted, adding batch processing and history tracking.
- Worked end-to-end with pre-trained models and third-party AI APIs – prompt design, validation, and error handling.

Projects

ZipForgeX — Spring Boot, Java 17, React, PostgreSQL, NVIDIA NIM, OAuth2

Live at zipforge.in

- Built and deployed a full-stack app (Spring Boot backend, React + Vite + Tailwind frontend) converting folder-structure text into downloadable ZIPs, hosted under a custom domain.
- Integrated an AI folder-structure generator via a JWT-gated endpoint calling NVIDIA NIM, with a prompt locked to 4-space indentation for parser compatibility.
- Implemented JWT + Spring Security auth with Google/GitHub OAuth2 and ZIP history on PostgreSQL/Supabase; hardened against Zip Slip attacks, covered by 12 tests.

ChainSight — Python, YOLOv8, NetworkX, Shapely, Gemini, Streamlit

Code: github.com/Narendran-ds/chainsight

- Architected a five-layer pipeline (Vision → Spatial → World Graph → Rule Engine → Narration) turning warehouse video into auditable safety events, deployed on Streamlit Cloud with 58 tests.
- Trained a YOLOv8 detector on a 17-class, 13,731-image dataset, reaching mAP@50 of 0.77 (0.89 on exit-zone markers) via leakage-safe splitting.
- Built a deterministic rule engine (R1–R5) over a NetworkX/Shapely world graph, with Gemini constrained to rephrase-only narration to prevent hallucination.

Education

B.Tech in Artificial Intelligence and Data Science

2023 – 2027

Rajalakshmi Institute of Technology, Poonamallee, Chennai

CGPA: 7.53/10

Class 12

Completed March 2023

Velammal Vidyalaya, Paruthipattu

Achievements and Leadership

- Shortlisted from Rajalakshmi Institute of Technology to represent the college at Cognizant Technoverse Hackathon 2026, a national-level hackathon with 22,000+ participants.
- Scout and Guide Leader: Led teams and demonstrated discipline in school-level camps.
- Discipline Committee Leader: Faculty-selected peer conduct manager.
