Summary

AI Engineer and Full-Stack Developer who has built and deployed both AI pipelines and production systems: a Gemini API pipeline generating 500+ cuisines at Syncorb Geotech, and ZipForgeX (zipforgex.in), a live Spring Boot and React application with three working authentication flows and JWT security. Works fluently with AI tools (Claude, ChatGPT, Gemini API) to accelerate development while owning architecture, debugging, and deployment decisions.

Skills

Languages: Python, Java, SQL

Data & Analytics: pandas, NumPy, scikit-learn, XGBoost, SHAP, Power BI, Excel

AI/ML: PyTorch, Gemini API, PaddleOCR

AI-Assisted Development: Claude, ChatGPT (debugging, prototyping, accelerated iteration)

Backend: Spring Boot, REST APIs, PostgreSQL

Frontend: React, Tailwind CSS

Tools: Git, GitHub, Render, Vercel

Experience

AI Developer Intern

Oct 2025 - May 2026

Syncorb Geotech Pvt Ltd, Chennai

- Identified the manual data bottleneck and independently built a Gemini API pipeline to generate 500+ global cuisines and up to 500 dishes per cuisine, replacing manual BeautifulSoup and 5 Scrapy spiders with an AI-driven workflow; added a history system so completed entries are skipped on reruns, eliminating repeated processing overhead.
- Rebuilt the restaurant menu extraction pipeline from scratch using PaddleOCR after Zomato restricted the API access; implemented folder-based batch processing with history tracking, replacing a broken 70% complete prototype with a fully production-ready system.

Projects

ZipForgeX — Java, Spring Boot, React, PostgreSQL

Live at zipforgex.in

- Architected a production full-stack application converting structured text into validated directory trees and downloadable ZIP archives, with the backend deployed on Railway and the frontend on Vercel.
- Strengthened platform security and usability by implementing three authentication flows (Email, Google OAuth2, GitHub OAuth2) with JWT and a PostgreSQL-backed ZIP history feature.

ChainSight — Warehouse Safety Causal Event Reasoning System — Python, YOLOv8, ByteTrack, NetworkX, Gemini API

Code: github.com/Narendran-ds/chainsight — Demo: Live App

- Engineered a five-layer explainable pipeline (vision, spatial, world-graph, rule engine, narration) with only one trained model — tracking and rule-based reasoning are fully deterministic and auditable.
- Fine-tuned YOLOv8 on 13,700+ images from three merged Roboflow sources (17 classes), reaching 76.78% mAP50; deployed as an interactive Streamlit demo with live rule-event playback and Gemini narration.

Customer Churn Prediction — Python, XGBoost, Streamlit

Code: github.com/Narendran-ds/Customer-churn-prediction-with-XAI-

- Achieved 89% prediction accuracy on a 10,000-sample telecom dataset by engineering features and benchmarking Logistic Regression, Random Forest, and XGBoost via scikit-learn pipelines.
- Improved prediction transparency for non-technical stakeholders by integrating SHAP explainability into a real-time, interactive Streamlit dashboard.

Education

B.Tech in Artificial Intelligence and Data Science

2023 - 2027 (Expected)

Rajalakshmi Institute of Technology, Poonamallee, Chennai

CGPA: 7.44/10

Class 12

Completed March 2023

Velammal Vidyalaya, Paruthipattu

Achievements and Leadership

- Scout and Guide Leader: Led teams and demonstrated discipline in school-level camps.
- Discipline Committee Leader: Faculty-selected peer conduct manager.
